

Technology Spotlight: Decision Source

DecisionSource® strengthens decision-making through data, analysis, insights

As the small-to-medium enterprise brand of BCD Travel, Acendas Travel has access to cutting edge technology to improve your decision-making.

One such tool is DecisionSource®. It allows our team to analyze your travel program data and proactively provide notifications and actionable insights into traveler behavior, compliance, supplier negotiations and duty of care.

It's a powerful tool, delivering valuable results, allowing improved operations through educated and confident decision-making:

- Strengthen deals with supplier KPI's
- Put program results into context by setting targets and benchmarks.
- Present your program performance with accurate, compelling visuals.
- Monitor and manage risk, compliance and spend even before trips begin.
- Analyze traveler behavior with compliance dashboards and drill down to traveler detail.

Quality You Can Count On
Dashboards, proactive insights, and security maps are great, but how do you know you can trust the data behind them?

At Acendas Travel, we take data quality seriously. We start by consolidating data from 200+ sources to give you a holistic view of your program.

Then we normalize and enrich your data to fill in any gaps. Our 24x7 data quality monitoring ensures we can fast track any corrections. Only clean data makes it's way to you.

Consultative Mangement
DecisionSource® is supported by the Acendas Travel program management group which in essence becomes a member of your team. Our industry experience allows us to help you to utilize the data to maximize return.

"Our technology focus is on making the travel manager's job easier and enhancing the travel experience."

*Brent Blake, President
Acendas Travel*
