

Technology Spotlight: Mission Control ReRoute

Answering the Call of Flight Disruptions

We've all been there before. You've begun your trip, when suddenly you receive a text that your flight is canceled or significantly delayed. After the initial moments of despair, the scrambling begins.

Acendas Travel has a solution. It has developed a new technology in the form of Mission Control ReRoute.

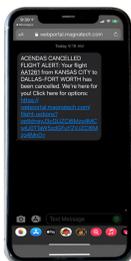

All it requires is a smartphone and with a few clicks and swipe of a screen, a new flight is scheduled.

Mission Control ReRoute

- Proactive traveler communications when flight(s) are canceled or significantly delayed.
- Utilizes smartphone technology.
- Offers rebooking options on current airline and different ones.
- Offers the option to contact Acendas Travel agents directly via chat.
- All transactions are confirmed.

Mission Control ReRoute: How it Works

Step 1:
Text alert sent to traveler that flight has been disrupted

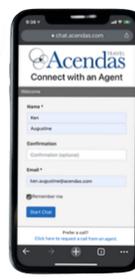

Step 2:
Traveler clicks link to review new flight options

Step 3:
Book different flight from the current airline or different one

Step 4:
If necessary, traveler utilizes the chat feature

"A key focus of Acendas Travel's technology resources is to enhance the traveler experience by offering self-service options."
